ASHA M. TARSADIA INSTITUTE OF COMPUTER SCIENCE AND TECHNOLOGY

Department of Computer Science and Engineering

ACADEMIC MINI-PROJECT REPORT

Personal Portfolio Website

A Responsive, Modern Web Application with Version Control & Continuous Static Deployment

Student Name:	Chadoker Aditi Gulabrao
Enrollment Number:	202603103520007
Subject Code:	IT4048
Subject Name:	Version Control with Git and GitHub
Repository Name:	MyPortfolio
Deployment Platform:	GitHub Pages (project designed for static deployment)
Job Role / Title:	Computer Science Engineering Student
Academic Year:	2026

Surat, Gujarat, India

1. Introduction & Project Objectives

1.1 Introduction

In the modern software engineering landscape, a personal developer portfolio serves as a digital resume and technical identity for aspiring computing professionals. Rather than relying solely on static paper resumes, a well-crafted web portfolio demonstrates practical knowledge of frontend technologies, user experience design, responsive layouts, and professional presentation.

This project, titled **Personal Portfolio Website**, was designed as a personal academic web project for Chadoker Aditi Gulabrao. The website provides a modern presentation of the student's academic profile, technical skills, projects, career objective, contact information, and downloadable resume.

1.2 Primary Objectives

Professional Digital Presentation: Present student information, technical skills, academic background, and projects in a structured manner.

Design & Custom Aesthetic: Implement a modern portfolio interface with dark/light theme support, glassmorphism-style cards, animations, and cyan/blue visual accents.

Light & Dark Theme Architecture: Provide a theme toggle for switching between dark and light presentation modes.

Mobile-First Responsiveness: Ensure usability across desktop, tablet, and mobile screen sizes through responsive CSS media queries.

Interactive Frontend: Use Vanilla JavaScript for mobile navigation, typing animation, project filtering, project details modal, form validation, and utility interactions.

Static Hosting Compatibility: Keep the project based on HTML5, CSS3, and Vanilla JavaScript so it can be deployed as a static website.

1.3 Technologies Applied

Category	Technology	Purpose / Role in Project
Structure	HTML5	Semantic structure for navigation, hero, about, skills, projects, resume, contact, and footer sections.
Styling	CSS3	Responsive layout, theme variables, glassmorphism, animations, buttons, cards, and media queries.
Behavior	JavaScript (Vanilla)	Typing animation, theme switching, mobile menu, project filtering, project modal, validation, and back-to-top behavior.
Backend Basics	Basic PHP	Listed as a technical skill and basic web-development knowledge; not required by the static portfolio itself.
Database	MySQL	Listed as a technical skill and database knowledge; not required by the static portfolio itself.
Version Control	Git & GitHub	Version-control learning and repository management for the portfolio project.

Technical Standard Adherence

The portfolio code follows the intended HTML5, CSS3, and modern JavaScript approach and does not require React, Node.js, Bootstrap, or another frontend framework. The project is structured as a static client-side website and is therefore suitable for GitHub Pages-style hosting.

2. System Architecture & Features

2.1 Directory Structure

The project follows the requested clean structure for a simple static portfolio:

```
MyPortfolio/
■■■ index.html    # Main portfolio webpage
■■■ style.css     # Main stylesheet and responsive design
■■■ script.js     # Vanilla JavaScript interactions
■■■ resume.pdf    # Downloadable resume PDF
■■■ assets/
  ■■■ images/    # Portfolio image assets
```

2.2 Functional Modules & Website Sections

Module	Description
Navigation Bar	Responsive navigation with section links and mobile navigation support.
Home / Hero Section	Introduces Aditi with her name, Computer Science Engineering Student role, short introduction, call-to-action buttons, and typing animation.
About Me Section	Presents career objective, academic background, and interest in Web Development.
Skills Section	Displays HTML, CSS, JavaScript, Basic PHP, MySQL, Web Development, and Git & GitHub learning.
Projects Section	Showcases Portfolio Website and Restaurant Management System, with project filtering and project-detail modal behavior.
Resume / CV Section	Provides a downloadable resume.pdf file from the portfolio.
Contact Section	Provides contact details and client-side contact form validation.
Footer & Utility	Provides footer information and a back-to-top control with smooth scrolling.

Key Design Decisions

1. Zero Build-System Dependency: The portfolio uses native HTML, CSS, and Vanilla JavaScript, so it does not require Node.js to run the website in a browser.

2. Dark / Light Theme: CSS variables and JavaScript theme controls provide a consistent theme-switching experience.

3. Responsive Layout: CSS media queries adapt the layout for smaller screens, including mobile navigation and stacked buttons.

4. Accessible Interaction: Buttons, navigation, modal behavior, and form feedback are designed to provide clear user interaction.

3. Git & GitHub Version Control Pipeline

3.1 Version Control Methodology

Version control is the discipline of managing changes to software source code over time. For this project, Git and GitHub are included as part of the student's current technical learning. The repository can be used to track changes to index.html, style.css, script.js, resume.pdf, and assets.

3.2 Suggested Commit History & Semantic Conventions

The following commit style matches the structure of the portfolio work:

feat(structure): initialize HTML5 portfolio foundation

style(design): implement responsive portfolio design

feat(interactivity): add theme switcher and mobile navigation

feat(projects): add project filtering and detail modal

feat(resume): add downloadable resume PDF

test(qa): verify navigation, form validation, and responsive layout

docs(report): compile academic mini-project report

3.3 Deployment Pipeline (GitHub Pages)

A static deployment workflow for this portfolio can follow the sequence:

Local Workspace → **Git Staging (git add)** → **Commit (git commit)** → **Push to GitHub (git push)** → **GitHub Pages** → **Live Static Website**

3.4 Project Runtime Note

Because the portfolio is built with HTML, CSS, and browser-side JavaScript, the JavaScript file should be loaded by index.html in a browser or through a development server such as Live Server. Running **node script.js** is not required for this project.

4. Code Implementation & Quality Assurance

4.1 HTML Implementation

The index.html file acts as the main document and organizes the portfolio into semantic sections. The page contains the navigation bar, hero area, About Me, Skills, Projects, Resume, Contact, and Footer sections. The resume download action points to the local **resume.pdf** file.

4.2 CSS Implementation

The style.css file controls the visual presentation of the website. It includes responsive layouts, theme variables, glassmorphism, animations, project presentation, form styling, and media queries for smaller screens.

4.3 JavaScript Implementation

The script.js file provides browser-side interaction including the typing animation, mobile navigation, dark/light theme switching, project category filtering, project details modal, contact form validation, smooth scrolling, and back-to-top functionality.

4.4 Test Plan

ID	Feature Tested	Test Action / Input	Expected Result	Status
TC-01	Page Load	Open index.html in browser / Live Server.	Portfolio loads with linked CSS and JavaScript.	To Verify
TC-02	Theme Switching	Click the theme toggle.	Dark/light theme changes correctly.	To Verify
TC-03	Mobile Navigation	Use the menu on a small viewport.	Navigation drawer/menu works correctly.	To Verify
TC-04	Project Filtering / Modal	Filter project cards and open details.	Correct projects display and modal opens.	To Verify
TC-05	Contact Validation	Submit empty/invalid fields.	Validation messages appear.	To Verify
TC-06	Resume PDF	Click Download Resume.	resume.pdf opens/downloads successfully.	To Verify
TC-07	Smooth Scroll	Click navigation links.	Page scrolls to target sections.	To Verify
TC-08	Back-to-Top	Click back-to-top control.	Page returns smoothly to the top.	To Verify

Testing status is intentionally marked **To Verify** because the project files were not executed during preparation of this report. No test results have been invented.

5. Project Evidence & Personal Profile

5.1 Project 01: Portfolio Website

A responsive personal portfolio website created to showcase Chadoker Aditi Gulabrao's academic profile, technical skills, projects, and career objective. The website is designed with HTML, CSS, and Vanilla JavaScript and includes interactive frontend functionality.

Technologies Used: HTML, CSS, JavaScript

Key Features: Navigation bar, hero section, About Me, Skills, Projects, Resume/CV, Contact, Footer, dark/light mode, mobile navigation, smooth scrolling, typing animation, project filtering, project details modal, contact form validation, and back-to-top.

5.2 Project 02: Restaurant Management System

A website for managing restaurant operations. The project is included in the student's portfolio as a practical web-development project.

Technologies Used: Not fully provided in the submitted information.

5.3 Career Objective

A motivated Computer Science Engineering student with a strong interest in Web Development. I enjoy creating websites and learning new technologies. I am hardworking, a quick learner, and always ready to improve my skills.

5.4 Contact Information

Full Name	Chadoker Aditi Gulabrao
Role	Computer Science Engineering Student
Email	aditichadokar1106@gm
Phone	7016290838
City	Surat, Gujarat
LinkedIn	Not provided

6. Academic Profile & Technical Competencies

6.1 Education

Course / Qualification	Institution	Duration	Result
Diploma in Computer Science Engineering (CSE)	Tarsadia University	2023 – 2025	9.16 CGPA
Bachelor's Degree	Currently Pursuing	Current	—

6.2 Technical Skills

Skill	Focus
HTML	Web page structure and semantic markup
CSS	Styling, responsive design, animations, and layouts
JavaScript	Frontend interactivity and dynamic behavior
Basic PHP	Basic server-side web-development knowledge
MySQL	Database fundamentals
Web Development	Overall web application development
Git & GitHub	Version-control learning and repository management

6.3 Resume / CV Implementation

The portfolio includes a Resume/CV section with a direct download action for **resume.pdf**. The PDF is intended to contain the student's professional and academic information and is stored at the project root so the browser can access it through a relative link.

6.4 Responsive Design

The CSS implementation includes responsive breakpoints so the portfolio can adapt to smaller screens. Mobile behavior includes stacked hero buttons, adjusted content spacing, responsive cards, and mobile navigation.

7. Responsive Design & Deployment

7.1 Mobile Device Rendering

The portfolio is intended to remain usable on mobile devices by using CSS media queries and a responsive navigation pattern. The design avoids requiring a separate mobile application.

7.2 GitHub Repository & Live Deployment

The repository name for this project is **MyPortfolio**. The project structure is compatible with GitHub repository hosting and GitHub Pages static deployment. The actual GitHub username, repository URL, and live deployment URL were not provided, so no unverified links are included in this report.

7.3 Deployment Steps

1. Create or open the MyPortfolio project folder.
2. Initialize Git and add the project files.
3. Commit the HTML, CSS, JavaScript, resume, and assets.
4. Create a GitHub repository named MyPortfolio and push the project.
5. Enable GitHub Pages for the repository.
6. Open the generated GitHub Pages URL to verify the live portfolio.

7.4 Conclusion

The Personal Portfolio Website demonstrates practical use of HTML5, CSS3, and JavaScript for building a responsive and interactive web application. It presents Chadoker Aditi Gulabrao's academic background, technical skills, career objective, and project work in a professional digital format.

The project also provides a foundation for continued learning in Git and GitHub, Basic PHP, MySQL, responsive web design, and frontend development. The static architecture makes the portfolio suitable for deployment through GitHub Pages after repository configuration.

Overall, the portfolio serves as both a learning project and a digital professional profile that can be expanded as new skills, projects, certifications, and achievements are added.

8. Final Project Summary

This academic mini-project report follows the organization and terminology of the supplied reference report while replacing the original student's information with Chadoker Aditi Gulabrao's provided information. Website screenshots have intentionally been omitted.

8.1 Final Project Contents

Core files: index.html, style.css, script.js, resume.pdf
Repository: MyPortfolio
Primary technologies: HTML5, CSS3, JavaScript
Additional skills: Basic PHP, MySQL, Git & GitHub (Learning)
Main projects: Portfolio Website; Restaurant Management System

8.2 Academic Details

Enrollment Number: 202603103520007
Subject Code: IT4048
Subject Name: Version Control with Git and GitHub

8.3 Information Not Provided

The following items were not supplied and therefore have not been invented: complete email address beyond the text provided, LinkedIn URL, GitHub URL, and the complete technology list for the Restaurant Management System.

Student Name: Chadoker Aditi Gulabrao

Course: Computer Science Engineering

Institution: Tarsadia University

Enrollment Number: 202603103520007

Location: Surat, Gujarat, India

Candidate Signature: _____

Course Evaluator: _____
